5 Definition of D

6 Autonomy

STEP 1 OF 6

Define the Worker: what it does, where its work stops

What kind of work does it perform?

Integration modernization

Middleware estates: flows, orchestrations, adapters

Mainframe modernization

COBOL, JCL and CICS estates (coming soon)

Tech currency upgrade

In-place version uplift (coming soon)

Business domain (optional)

Payments

Cards and merchant

Core banking

Commercial lending

What does this Worker do, and where does its work stop?

Converts Integration Service to Target Code

Produces: compiling, testable Spring Boot service

Does not: generate unit tests / promote to production / modify business rules

Confirm identity

Worker identity
